

Azure Machine Learning: Making Data Science Easy(er)

I came to know a meetup in Charlotte which is on Machine Learning and decided to join the meetup to enlighten with the basic understanding of Machine Learning. On Sep 06, 2017, I went to NC Music factory sharp at 6.00 PM and took a sit. After a warm welcome by the organizer I took some snack and started introducing to other participants. I met the presenter of the day, Brad Llewellyn - Brad is a Data Scientist at Valorem in Charlotte, NC and he was going to cover Azure Machine Learning. The session was a highly interactive demonstration on Data Science and Deep Learning. We went through an example of how to use Azure Machine Learning to predict income based on demographic data. We found that using Azure Machine learning it is very easy to:

- Set up an Azure Machine Learning workspace
- Clean up our data for modeling
- Train and Evaluate a predictive model
- Publish this model as an easily consumable web service.

After the presentation, we had a Q & A session followed by meet with other participants. I really enjoyed the session and decided to join their next meetup.
